Response to Amendment

This is in response to the Amendment filed 12 July 29010.

(Previous) DETAILED ACTION

Specification

1. The objection to the specification has been **withdrawn** in view of Applicants' Amendment.
2. The objections to the disclosure because of minor informalities have been **withdrawn** in view of Applicants' Amendment.

Claim Objections

3. The objections of claim 8-10 under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n) have been **withdrawn** in view of Applicants' Amendment.

Claim Rejections - 35 USC § 103

4. The rejection of claims 1-10 under 35 U.S.C. 103(a) as being unpatentable over Satsuma et al. (US 2003/0215704) in view of JP 2003-119313 (hereafter JP '313), and further in view of Kobayashi et al. (US 6,802,925) have been **withdrawn** in view of Applicants' Amendment.

Response to Arguments

5. Applicants' arguments, see page 8, line 19 through page 13, last line, filed 12 July 2010, with respect to claims 1-3 and 5-8 have been fully considered and are persuasive. The rejections of the claims have been **withdrawn**.

REASONS FOR ALLOWANCE

6. The following is an examiner's statement of reasons for allowance:

Claims 1-3 and 5-8 are allowable because of the recitation in claim 1 of *a partially crosslinked adhesive carried on the substrate porous film, and having a gel fraction in a range of 5 to 80%, the partially crosslinked adhesive being prepared by carrying on the substrate porous film a reactive polymer having a functional group capable of reacting with a polyfunctional isocyanate group therein with and, a polyfunctional isocyanate in such a quantity sufficient for the reactive polymer to be partially crosslinked, and then by reacting the reactive polymer with the polyfunctional isocyanate.*

Specifically, claims 1-3 and 5-8 are allowable the prior art references of record do not teach or suggest an adhesive-carrying porous film comprising

a substrate porous film such that when a probe of a probe penetrating thermomechanical analyzer, said probe having a diameter of 1 mm, is placed on the porous film under a load of 70 g to measure a thickness thereof while heating the porous film from room temperature at a rate of 2 °C/minute, a temperature at which the thickness of the porous film decreases to a half of the thickness of the porous film when the probe was initially placed thereon is 200 °C or more; and

a partially crosslinked adhesive carried on the substrate porous film, and having a gel fraction in a range of 5 to 80%, the partially crosslinked adhesive being prepared by carrying on the substrate porous film a reactive polymer having a functional group capable of reacting with a polyfunctional isocyanate group therein with and, a polyfunctional isocyanate in such a

quantity sufficient for the reactive polymer to be partially crosslinked, and then by reacting the reactive polymer with the polyfunctional isocyanate.

The prior art references of record do not teach or suggest the substrate porous film in combination with the partially crosslinked adhesive carried on the porous substrate film.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
